

☆☆☆☆☆ **Doesn't work, poor instructions**

By [verbotten](#), January 14, 2013 for WP 3.5

this plugin won't install even after changing Chmod to 777 on content folder.
Alternative ways to install instruction is poorly written. Says open file /public_html/wp-content/plugins/wp-super-cache/advanced-cache.php\$wp_cache_file
wHELL is advanced-cache.php\$wp_cache_file thers no such file and whats with \$ sign

replace text CACHEHOME to my folder dir in supercache php file , except there is no CACHEHOME text in the file, it's WPCACHEHOME and it's set as variable name. Anyways ..

I had installed before WP-Total-Cache, which produces heavy traffic on my shared hosted server.
WP-Super Cache is the best!

☆☆☆☆☆ **Better than W3 Total Cache**

W3 Total Cache is so heavy, puts more pressure on server, I don't know why so many people use W3 Total Cache/
WP Super Cache is my best, always.
